MINIGUIA DE COMO IR BEM NO INGLÊS DO VESTIBULAR DA UECE

Olá, me chamo Leandro e sou formado em Letras Português-Inglês pela Universidade Federal do Ceará. Pensei neste pequeno guia como uma forma de ajudar você naquela tão temida parte do inglês que fica lá no final de um já exaustivo teste. Talvez você não tenha tanta intimidade com o inglês assim e ache que seja é preciso ter domínio do idioma para resolver as questões, mas não é bem assim. Claro que ter uma bagagem boa do idioma ajuda, no entanto existem técnicas de leitura e algumas dicas que podem ajudar você que possui o básico do inglês.

Um fato sobre a parte do inglês na prova da UECE é que nenhuma das questões lida com gramática. Isso mesmo, aquela conjugação do verbo “to be” ou se é passado ou presente não é foco da parte do inglês no teste. As perguntas são feitas baseadas em um texto que você terá de se aventurar e tirar as informações para marcar a alternativa correta. Os textos costumam ter uma extensão até longa e não ajuda ser a última coisa que o participante terá que lidar depois de ter passado por um paredão de outras perguntas testando seus conhecimentos. Contudo, existem técnicas de leitura que são essenciais quando se está lidando com um idioma estrangeiro e ainda por cima correndo contra o relógio. A que eu explicarei agora é chamada de **scanning**.

Scanning é uma técnica de leitura rápida onde o leitor passa os olhos sobre o texto com a finalidade de achar palavras-chave e/ou pedaços de informações específicas. A técnica é assim chamada porque você “escaneia” o texto para buscar o que você precisa. No entanto, como saber o que procurar? Uma dica que eu mesmo aplicava é ler as perguntas e alternativas ANTES de ir para o texto. Me familiarizar com a informação que eu precisava deixava a minha busca pelo texto muito mais rápida. Muitas vezes, a informação vai estar tal qual no texto pois a pergunta é praticamente tirada do texto mas sem alterações. No entanto, não é assim para todas as perguntas. Algumas parafraseiam o conteúdo juntamente com as alternativas e para isso, **skimming** também poderá ser empregado. **Skimming** é

uma técnica de leitura rápida que visa obter uma informação geral sobre o texto, seus temas e outras informações. É uma leitura “por cima”. Empregar essas duas técnicas irão lhe ajudar bastante ao lidar com o teste. Como exemplo, vamos ver o texto e analisar algumas questões da prova de 2020.1. Leia o texto antes de partir para a análise para se familiarizar com a mesma.

I Used to Fear Being a Nobody. Then I Left Social Media.

By Bianca Brooks

“What’s happening?”

I stare blankly at the little box as I try to think of something clever for my first tweet. I settle on what’s at the top of my mind: “My only #fear is being a nobody.” How could I know this exchange would begin a dialogue that would continue nearly every day for the next nine years of my life?

I began using Twitter in 2010 as a newly minted high school freshman. Though it began as a hub for my quirky adolescent thoughts, over the years it became an archive of my emotional and intellectual voice — a kind of virtual display for the evolution of my politics and artistic identity. But after nine years, it was time to close the archive. My wanting to share my every waking thought became eclipsed by a desire for an increasingly rare commodity — a private life.

Though I thought disappearing from social media would be as simple as logging off, my refusal to post anything caused a bit of a stir among my small but loyal following. I began to receive emails from strangers asking me where I had gone and when I would return. One message read: “Not to be over familiar, but you have to come back eventually. You’re a writer after all. How will we read your writing?” Another follower inquired, “Where will you go?”

The truth is I have not gone anywhere. I am, in fact, more present than ever.

Over time, I have begun to sense these messages reveal more than a lack of respect for privacy. I realize that to many millennials, a life without a social media presence is not simply a private life; it is no life at all: We possess a widespread, genuine fear of obscurity.

When I consider the near-decade I have spent on social media, this worry makes sense. As with many in my generation, Twitter was my entry into conversations happening on a global scale; long before my byline graced any publication, tweeting was how I felt a part of the world. Twitter functions much like an echo chamber dependent on likes and retweets, and gaining notoriety is as easy as finding someone to agree with you. For years I poured my opinions, musings and outrage onto my timeline, believing I held an indispensable place in a vital sociopolitical experiment.

But these passionate, public observations were born of more than just a desire to speak my mind — I was measuring my individual worth in constant visibility. Implicit in my follower’s question “Where will you go?” is the resounding question

“How will we know where you’ve gone?” Privacy is considered a small exchange for the security of being well known and well liked.

After all, a private life boasts no location markers or story updates. The idea that the happenings of our lives would be constrained to our immediate families, friends and real-life communities is akin to social death in a world measured by followers, views, likes and shares.

I grow weary when I think of this as the new normal for what is considered to be a fruitful personal life. Social media is no longer a mere public extension of our private socialization; it has become a replacement for it. What happens to our humanity when we relegate our real lives to props for the performance of our virtual ones?

For one, a predominantly online existence can lull us into a dubious sense of having enacted concrete change, simply because of a tweet or Instagram post. As “hashtag activism” has obscured longstanding traditions of assembly and protest, there’s concern that a failure to transition from the keyboard to in-person organization will effectively stall or kill the momentum of political movements. (See: Occupy Wall Street.)

The sanctity of our most intimate experiences is also diminished. My grandfather Charles Shaw — a notable musician whose wisdoms and jazz scene tales I often shared on Twitter — passed away last year. Rather than take adequate time to privately mourn the loss of his giant influence in my life alongside those who loved him most, I quickly posted a lengthy tribute to him to my followers. At the time I thought, “How will they remember him if I don’t acknowledge his passing?”

Perhaps at the root of this anxiety over being forgotten is an urgent question of how one ought to form a legacy; with the rise of automation, a widening wealth gap and an unstable political climate, it is easy to feel unimportant. It is almost as if the world is too big and we are much too small to excel in it in any meaningful way. We feel we need as many people as possible to witness our lives, so as not to be left out of a story that is being written too fast by people much more significant than ourselves.

“The secret of a full life is to live and relate to others as if they might not be there tomorrow, as if you might not be there tomorrow,” the writer Anais Nin said. “This feeling has become a rarity, and rarer every day now that we have reached a hastier and more superficial rhythm, now that we believe we are in touch with a greater amount of people. This is the illusion which might cheat us of being in touch deeply with the one breathing next to us.”

I think of those words and at once any fear of obscurity is eclipsed by much deeper ones — the fear of forgoing the sacred moments of life, of never learning to be completely alone, of not bearing witness to the incredible lives of those who surround me.

I observe the world around me. It is big and moving fast. “What’s happening?” I think to myself.

I’m just beginning to find out.

From:www.nytimes.com/Oct. 1, 2019

Veja como está a primeira pergunta:

73. The author was actively involved with social media for

A) almost a decade.

B) two decades.

C) most of her life.

D) a short period in her adolescence.

Uma informação simples e direta é pedida. Se pede por quanto tempo a autora do texto estava envolvida com as mídias sociais. Eis o trechos onde a resposta está:

"I began using Twitter in 2010 as a newly minted high school freshman. Though it began as a hub for my quirky adolescent thoughts, over the years it became an archive of my emotional and intellectual voice — a kind of virtual display for the evolution of my politics and artistic identity. **But after nine years**, it was time to close the archive. My wanting to share my every waking thought became eclipsed by a desire for an increasingly rare commodity — a private life."

"When I consider the **near-decade** I have spent on social media, this worry makes sense."

As partes que eu destaquei significam "Mas depois de nove anos" e "quase uma década" respectivamente. No primeiro trecho a pista não está tão expressa assim como no segundo, mas ao escanear o texto esses pedaços de informações saltam aos olhos. O ano em que o texto foi escrito, 2019, também é mostrado no fim do texto e o ano em que ela criou sua conta no Twitter também aparecem no texto. Logo, com todas essas pistas é seguro dizer que a primeira alternativa é a correta.

Vejamos agora a segunda pergunta:

74. The author states that for millennials, social media has become so much part of their lives that somehow it comes to be

A) more relevant than any real interaction.

B) an obsession, an addiction.

C) identified with life itself.

D) an insurmountable problem in their daily routine.

O enunciado por si só já nos dá bastante informação de como nos situar ao buscar a informação que precisamos. "Millennials" e "social media" chama a atenção

pois a segunda é um tema recorrente e a primeira é uma nova informação dada. Ao correr o texto, encontramos o que precisamos:

"Over time, I have begun to sense these messages reveal more than a lack of respect for privacy. I realize that to many **millennials**, a life without a **social media** presence is not simply a private life; it is no life at all: We possess a widespread, genuine fear of obscurity."

A informação que precisamos está um pouco mais difícil de conseguir pois requer um pouco mais de análise. O parágrafo diz que muitos da geração dos "millennials" encaram a vida sem presença nas mídias sociais como ausência dessa mesma vida, como se a pessoa praticamente não existisse. Nas alternativas vemos palavras cognatas que se traduzem por relevante, interação, obsessão, problema e rotina. Algumas das alternativas podem ser viáveis devido a temática do texto, mas uma coisa chama a atenção. A palavra "life" é recorrente e se você não conseguiu compreender o trecho, ela pode ser uma aposta segura. Atenção para o "no", que significa a negação de algo. No enunciado tem "part of their lives", ou seja, as mídias sociais são parte da vida deles que sem isso, não há vida. As mídias se tornaram a própria vida deles, o que aponta para a terceira alternativa.

Essa questão requer um nível de interpretação maior, requerendo uma atenção redobrada ao ser resolvida.

Vejamos agora a terceira pergunta:

75. For the author herself, Twitter was the platform for important things in her life, including the

A) expression of her emotions and artistic identity.
B) exposition of her whole family life experiences.
C) professional development and achievements.
D) travelling accounts.

Este está mais simples de encontrar:

"I began using Twitter in 2010 as a newly minted high school freshman. Though it began as a hub for my quirky adolescent thoughts, over the years it became an archive of my **emotional** and intellectual voice — a kind of virtual display for the evolution of my politics and **artistic identity**."

Palavras derivadas como “emotional” também ajudam como palavras-chave no processo de leitura. Rapidamente podemos concluir que a primeira alternativa é a correta.

Passemos agora para a quarta questão:

76. The author states that people are so much into social media that it has

A) interfered with their work relationships.

B) caused misunderstandings between teachers and students.

C) helped people improve their writing skills.

D) become a substitute for private life interaction.

Essa questão possui um desafio maior para encontrarmos o que precisamos. Mais uma vez “social media” é o guia que deve ser usado. Mas esta palavra está espalhada por todo o texto, então como achar a resposta com mais facilidade. Até aqui você já deve ter corrido o texto mais de uma vez então uma certa familiaridade com ele já deve ter surgido. A dica é associar as palavras que você vê nas alternativas junto com a procura por “social media”. Aqui o que é encontrado:

“I grow weary when I think of this as the new normal for what is considered to be a fruitful personal life. Social media is no longer a mere public extension of our **private** socialization; it has become a replacement for it. What happens to our humanity when we relegate our real lives to props for the performance of our virtual ones?”

Perceba a palavra que vem após “private”. Ela tem o mesmo significado em português, assim como a última palavra da alternativa D). Mesmo se focando em palavras-chave, a ideia geral é que estamos substituindo o real pelo virtual. Além disso, nenhum dos outros tópicos citados nas alternativas aparece no texto. A última alternativa é a correta neste caso.

Passemos para a quinta questão:

77. As to the reasons that lead people to being so much on social media, the author raises the hypothesis that it might be related to a world in which people tend to feel

A) depressed on a daily basis.

B) unimportant as social beings.

C) tired of the long working hours.

D) too politically involved.

Uma coisa a se notar é que nem sempre as questões serão uma espécie de transcrição de elementos do texto mas sim paráfrases podem ocorrer. Mas isso não é empecilho para encontrarmos a resposta. Política foi um algo mencionado no texto mas cuidado, é uma casca de banana. Ela menciona política, mas critica o engajamento apenas virtual, não mencionando se pessoas estão envolvidas demais com política ou não. Ao praticar a associação com as palavras-chave das alternativas, você encontrará isso:

"Perhaps at the root of this anxiety over being forgotten is an urgent question of how one ought to form a legacy; with the rise of automation, a widening wealth gap and an unstable political climate, it is easy to feel **unimportant**."

Apesar de ser só uma palavra, esse trecho é condizente com a ideia geral de estarmos tão presentes nas mídias sociais e o receio de sermos esquecidos se não estivermos nelas. É uma questão que requer um pouco mais de reflexão. A alternativa correta é a segunda.

Como se pode ver, as questões variam entre detectar informações simples até usar um pouco de interpretação usando as palavras-chave, passando por ter uma compreensão geral da mensagem do texto. Aqui entra agora recomendações para que você pode se preparar de antemão e se habituar. Antes de mais nada, tenha contado com o idioma. Há vários exercícios e vídeos sobre técnicas de leitura disponíveis na internet. Também baixe as provas do próprio site da UECE e simulações de outros testes. Se você quer continuar estudando inglês para além do teste, o que eu recomendo é que você se cerque de mídia em inglês: vídeos, jogos, música, leitura, etc. Pratique em partes e foque no que quer aprender no dia.

No mais, faça do estudo uma constante e tenha uma rotina diária dedicada. Eventualmente, você vai ver o progresso acontecer. E para dar início, estarei

deixando abaixo a parte de inglês do vestibular 2015.1. Leia o texto e tente resolver antes de checar o gabarito. Use das técnicas que você viu antes de usar recursos externos (como dicionários) para ver como se sai. Boa sorte em sua jornada.

The global mortality rate for children younger than 5 has dropped by nearly half since 1990, the United Nations said Tuesday in an annual report on progress aimed at ensuring child survival, but the decline still falls short of meeting the organization's goal of a two-thirds reduction by next year. Without accelerated improvements in reducing health risks to young children, the report said, that goal will not be reached until 2026, 11 years behind schedule.

Nearly all of the countries with the highest mortality rates are in Africa, the report said, and two countries that are among the world's most populous — India and Nigeria — account for nearly a third of all deaths among children younger than 5.

A collaboration of Unicef, other United Nations agencies and the World Bank, the report provides a barometer of health care and nutrition in every country. A child mortality rate can be a potent indicator of other elements in a country's basic quality of life.

The report showed that the mortality rate for children younger than 5, the most vulnerable period, fell to 46 deaths per 1,000 live births last year, from 90 per 1,000 births in 1990. It also showed that the gap in mortality rates between the richest and poorest households had fallen in all regions over most of the past two decades, except for sub-Saharan Africa.

The report attributed much of the progress to broad interventions over the years against leading infectious diseases in some of the most impoverished regions, including immunizations and the use of insecticide-treated mosquito nets, as well improvements in health care to expectant mothers and in battling the effects of diarrhea and other dehydrating maladies that pose acute risks to the young.

"There has been dramatic and accelerating progress in reducing mortality among children, and the data prove that success is possible even for poorly resourced countries," Dr. Mickey Chopra, the head of global health programs for Unicef, said in a statement about the report's conclusions.

Geeta Rao Gupta, Unicef's deputy executive director, said, "The data clearly demonstrate that an infant's chances of survival increase dramatically when their mother has sustained access to quality health care during pregnancy and delivery."

Despite the advances, from 1990 and 2013, 223 million children worldwide died before their fifth birthday, a number that the report called "staggering." In 2013, the report said, 6.3 million children younger than 5 died, 200,000 fewer than the year before. Nonetheless, that is still the equivalent of about 17,000 child deaths a day, largely attributable to preventable causes that include insufficient nutrition; complications during pregnancy, labor and delivery; pneumonia; diarrhea; and malaria.

While sub-Saharan Africa has reduced the under-5 mortality rate by 48 percent since 1990, the report said, the region still has the world's highest rate: 92 deaths per 1,000 live births, nearly 15 times the average in the most affluent countries. Put another way, the report said, children born in Angola, which has the world's highest rate — 167 deaths per 1,000 live births — are 84 times as likely to die before they turn 5 as children born in Luxembourg, with the lowest rate — two per 1,000.

The report noted that "a child's risk of dying increases if she or he is born in a remote rural area, into a poor household or to a mother with no education."

From: www.nytimes.com Sept. 16, 2014

QUESTIONS

55. Although the United Nations annual report shows mortality rate for children under 5 has dropped considerably worldwide, it is crucial to note that

A) the World Bank has to invest more money in the next two years.

B) malaria and pneumonia still pose a serious problem for African children.

C) the UN's goal will only be achieved within twelve years.

D) insufficient nutrition is the biggest challenge for impoverished regions.

56. One positive aspect Dr. Chopra cites is that the report shows

A) mortality rates in poor houses have decreased mainly in South America.

B) success can be achieved even in poor countries.

C) pneumonia, diarrhea, and malaria have finally been beaten.

D) immunizations are powerful tools in the fight against sicknesses.

57. The world's highest under-five mortality rate is in

A) Asian countries.

B) Brazil.

C) China.

D) sub-Saharan Africa.

58. Some of the broad interventions that brought progress against the mortality rate for children include

A) fighting dehydrating maladies in India.

B) building better schools in poorly resourced regions.

C) using mosquito nets treated with insecticide.

D) giving birth control pills to teenage girls.

59. Infant mortality rate is among the factors that account for the measurement of a nation’s

A) level of education.

B) economic growth.

C) democratic policies.

D) quality of life.

60. According to the UN annual report, one of the factors that increase the risk of a child’s death is

A) being born in an isolated countryside region.

B) having many brothers and sisters.

C) not having relatives to help.

D) being raised by one parent only.
